

Chilligrow

Contents:

1 x SmartReservoir

1 x Feeder Tray

3 x Pots

3 x FeederMats

1 x Black Top Up Bung

1 x Dipstick (used to check the water level in the SmartReservoir)

2 x Optional Nutrients* (1 x A bottle, 1 x B bottle)

Set-up instructions

- Place your SmartReservoir on an even surface.
- Place the Feeder Tray on top of the SmartReservoir.

- Insert the black bung into the hole.
This hole is for topping up your SmartReservoir. At this point DO NOT add any water into the SmartReservoir.

- Insert the FeederMat through the hole in the bottom of one of the pots until the pointed tip is just below the top of the pot (see image).
- Insert the FeederMat through the hole in the Feeder Tray and sit the pot in position. Ensure the FeederMat is touching the bottom of the reservoir.
- Repeat this with all pots.
- Fill the pots with compost while taking care to keep the FeederMat upright.
- Firm the compost down around the FeederMat ensuring there is good contact between the FeederMat and the compost.
- Make a hole in the compost large enough for your plant. Add your plant. Firm the compost down gently around the plant to settle the compost.
- Water well using a watering can with a rose until the compost is moist but not saturated.

IMPORTANT:

Do not add water to the SmartReservoir at this point.

Compost information

Use a standard multi-purpose compost, not a water-retaining/moisture-control or heavily fertilised one. Most compost contains nutrients. Check your compost bag to identify how many weeks feed the compost contains and add nutrients as described below from one week before the compost is due to run out of feed. If your compost does not contain nutrients, start adding nutrients from week one.

Feeding and watering

IMPORTANT: If you bought direct from Greenhouse Sensation, follow these instructions for the Nutrigrow plant fertiliser that came with your Chilligrow, otherwise refer to the instructions of your preferred nutrient brand.

- Add water to your nutrient bottles as indicated on the bottles.
- It is important to add water to the watering can and then add the 'A' nutrients to the water followed by the 'B' nutrients using the dosage rates.

Dosage rates

Add 6ml of nutrient 'A' and 6ml of nutrient 'B' to every 1 litre of water. Top-up the SmartReservoir as necessary. For best results keep the SmartReservoir fully topped-up.

The Chilligrow reservoir holds 7 litres.

During warm weather dampen compost from the top when you top-up your SmartReservoir.
