

## Top Tip

Have some water handy (preferably warm) as dipping the ends of the tubes just before inserting the connections makes everything much easier.

## Getting Started

- The Holiday Reservoir or Waterbutt tap needs to be at least 15cm higher than the Planter Reservoir.
- Make sure that your Holiday Reservoir or Waterbutt is within 1.8m of the Planter Reservoir.

## Connecting your Planter Reservoir to your Holiday Reservoir - Top Mounted

Quadgrow Square - Top Mounted

- Push the narrower end of the 1.8m tube through the hole in the Holiday Reservoir and push the White Filter over the tube on the inside of the Holiday Reservoir.
- Push the opposite end of the 1.8m tube into the end of the Red float. This will be a tight fit to make sure there are no leaks.
- Push the Red float in the hole on top of the Quadgrow tray.

## Connecting your Planter Reservoir to your Holiday Reservoir - Side Mounted

Quadgrow Slim, NFT 3 plant (GS100), NFT 5 plant (GS200) and Rain & Drain (GS300) - Side Mounted

- Push the narrower end of the 1.8m tube through the hole in the Holiday Reservoir and push the White Filter over the tube on the inside of the Holiday Reservoir.
- Push the threaded end of the Red float through the pre-drilled hole in your Quadgrow reservoir so that the thread is on the outside of the Reservoir, and fasten it in place using the supplied nut.
- Push the 1.8m tube inside the threaded end of the Red float. It is a tight fit to make sure there are no leaks.

## Connecting your Planter Reservoir to a Waterbutt

- Click your Waterbutt connector on to your Waterbutt tap.
- Connect the opposite end of the 1.8m tube to the Red float on the Planter Reservoir.

## If you are connecting 2 planters

- Push the narrower end of the 1.8m tube through the hole in the Holiday Reservoir and push the White Filter over the tube on the inside of the Holiday Reservoir.
- Push the two open ends of the T Connector into the Red float on each of the planter Reservoirs.
- Attach the 1.8m tube from the Holiday Reservoir to the narrow end of the T Connector.

### Adding an extra planter to your existing Holiday Watering set up

- Disconnect the tube from the Planter Reservoir closest to the Planter being added.
- Attach the disconnected tube to the narrow end of the T Connector.
- Connect the opposite end of the T Connector to the Planter that you have been using.
- Attach the remaining tube of the T Connector to the Water Level Controller on the added planter reservoir.

### Top Tips

- Storing your plant nutrient and water mix in a 10 Litre watering can makes it easy to calculate the dosage rate and helps you monitor what your plants are taking.

### Any Questions? Contact us

We are here to help you to get the best from your plants, so if you have any questions about your Greenhouse Sensation Holiday Watering Kit or the plants you are growing please feel free to contact one of our Gardening Angels on:
