**IMMEDIATE RELEASE**

[Greenhouse Sensation](#)

## **A Bumper Harvest for 2013**

Treat yourself to a holiday-proof veg plot and lower water bills in 2013 thanks to the [Click & Drip range](#) from [Greenhouse Sensation](#).

The Click & Drip is an easy to use irrigation kit which keeps veg plots and grow bags perfectly watered, reduces water use by up to 80% and removes the need to bribe neighbours to provide holiday-watering cover. It can even be used during hose-pipe bans.

The Click & Drip attaches to a [waterbutt](#) or [outdoor tap](#) and releases water slowly and evenly through its irrigation pipe so that plants take up the water before it forms puddles which evaporate. The Click & Drip's drip holes are spaced 30cms apart and only open with internal pressure, so they allow water out, but won't become blocked when hidden under soil, mulch and bark. 180ml is released per drip hole per hour (from a 100litre water butt).

The optional [digital water timer](#) allows you to customise watering frequency and duration down to the second and includes a clever sensor which skips a watering when it's raining.

Available for raised beds, veg plots and grow bags.

From £25.00
