**[GREENHOUSE SENSATION](#)**

**New Misting Propagator**  
**Cuts Gardeners' Losses**

A new [misting propagator](#) promises to increase cuttings success rates by preventing the problems of drying out, damping-off and fungal infections which often beset cuttings.

Cuttings are very vulnerable, if they lose moisture they shrivel before they can form roots, but they are equally vulnerable to water-logging. A cutting loses water through its leaves but has no root system by which it can absorb water. The [Hydropod Propagator](#) gets around this by spraying a mist around the cuttings which lowers the leaf temperature, creates a humid atmosphere and reduces the amount of water lost from the leaves - so cuttings are kept moist but without ever becoming water-logged, which is important because water-logging leads to rotting and mold.

The Hydropod cuttings propagator has a 7 day reservoir so there's no need to keep an eye on the water levels every day, meaning gardeners can go on holiday and not worry about their cuttings.

Greenhouse Sensation's Marketing Director explained: "Taking cuttings is a great way of increasing plant stock, but many gardeners don't grow from cuttings because they have experienced losses in the past or know people who have, we hope that our new Hydropod will encourage more people to give it a go."

The Hydropod has been designed by [Greenhouse Sensation](#), the team behind the award-winning Vitopod Propagator and is made by the company in England.

**About Hydropod**

Price: £47.95

Size: W37cm x L44cm x H41cm

### **About Greenhouse Sensation**

[Greenhouse Sensation](#) is a retailer and manufacturer of 'brilliant gardening products'. The company designed and manufactures the award-winning [Vitopod Propagator](#), [Grow planters](#) and [Click & Drip irrigation kits](#), all of which are made by Greenhouse Sensation's own team in England.

For 2012 Greenhouse Sensation has carefully selected products designed by other companies to be featured in its catalogue and on its website, making the website and [brochure](#) an essential destination for gardeners.

All products available on the Greenhouse Sensation website are extensively trialed in the company's greenhouses and polytunnels in Lancashire, where we also grow bananas. Greenhouse Sensation products are made in England from recycled material.
