

Using your Jiffy 7c Coir Pellets

1. After putting a handful of Jiffy Pellets in a bucket of water, wait 5 minutes then place a seed or cutting into each pellet.

2. Then place into seed trays in your propagator.

3. Keep watered and wait for the roots to grow out, at which point they will need to be re-potted into a plastic 9cm/10cm pot.

4. When the seedling is ready to be repotted (is at that point where it does not look too big or too small for the pot) from the pot transfer to a planter.
