Square rubber cover	1
Dipstick (used to check the water level in the SmartReservoir)	1
Nutrients	1x A Bottle & 1x B Bottle
Access cover	1
Nuts and Bolts	2 sets
HydroCoco bag	1
Solar panel	1
Pump	1
Dripper Kit with 8 drippers	1

Set-up instructions

IF YOU ARE USING A 'HOLIDAY WATERING KIT' WITH YOUR QUADGROW-SOLAR PLEASE USE THOSE INSTRUCTIONS FIRST

- Place your SmartReservoir on an even surface.
- Connect the cable of the pump to the back of the solar panel.
- Place the pump in the middle of the SmartReservoir.
- Place the Feeder Tray on top of the SmartReservoir.
- Feed the dripper cable up through the hole in the middle of the FeederTray.
- Place the square cover over the hole in the middle of the FeederTray.
- Place the access cover on the open end of the SmartReservoir and secure the Feeder Tray to the SmartReservoir with the nuts and bolts provided.
- Wet one of the FeederMats.
- Insert the FeederMat through the hole in the bottom of one of the pots until the pointed tip is just below the top of the pot (See image).
- Insert the FeederMat through the hole in the Feeder Tray and sit the pot in position. Ensure the FeederMat is touching the bottom of the SmartReservoir.
- Repeat this with all pots.
- Fill the pots with the HydroCoco while taking care to keep the FeederMat upright. The FeederMats should be completely covered by HydroCoco.
- Firm the HydroCoco down around the FeederMat ensuring there is good contact between the FeederMat and the HydroCoco.
- Make a hole in the HydroCoco large enough for your plant. Add your plant. Firm the HydroCoco down gently around the plant.
- Place two drippers into each pot, pushing the drippers approximately 1 inch down into the HydroCoco.
- Water well using a watering can with a rose until the HydroCoco is moist but not saturated.

Feeding and watering

IMPORTANT: Add water to your nutrient bottles as indicated on the bottles.

- DO NOT mix the nutrients together. It is important to add water to the watering can and then add the 'A' nutrients to the water followed by the 'B' nutrients using the dosage rates below.
- Add 6ml of nutrient 'A' and 6ml of nutrient 'B' to every 1 litre of water. The Quadgrow-Solar holds 30 Litres.
- Top-up the SmartReservoir as necessary. For best results and to maximise the life of the pump do not let the level of water in the SmartReservoir fall below the pump.

Optional accessories

Greenhouse Sensation have a range of other options to help you make the most of your Quadgrow-Solar;

Lids for Quadgrow-Solar pots

You can use lids to maintain warmth and humidity to help your plants grow.

Support Frames

Use a Support Frame to support your plants, keeping them on the straight and narrow.

Holiday Watering Kit

A 25 litre reservoir and water level regulator which simply links to your planter keeping it watered for longer. Includes all connectors and clear instructions.

How to care for your pump

We recommend keeping your pump working over the winter months.

- Use a bucket (preferably with a lid) and fill with clean water.
- Add some vinegar to the water to help prevent the build up of algae.
- Insert the pump into the bucket and let it run continuously until the following growing season. If you are worried the pump is being over worked, move the solar panel away from direct sunlight.
